

Take Control of Your Inventory Today

Effective inventory control is key to running a tight warehouse. It requires a vigilant team, keen attention to detail, and constant monitoring of all processes. This is where a WMS comes in.

But not all WMS or inventory management systems are built the same. Here's a checklist you can use when assessing your software to see if it can handle everything you need it to do:

Does your current software or system have:	Yes / No
Inbound	
Advanced shipping notices?	
Automated put-away recommendations?	
Outbound	
Built-in marketplace integrations?	
Smart order batching?	
Barcode scanning for QC?	
A logical walk sequence generator?	
Shipping options and label generation?	
Inventory control	
Barcode technology for inventory control?	
Lot control?	
Automatic forward-picking area replenishment triggers?	
Full tracking for every time a product is touched?	
Kitting	
Kit planning?	
Kit customization for customers?	
Reports and dashboards	
Warehouse management dashboards?	
Flexible reporting?	

If your current system lacks these key functions, consider switching to something more robust. VeraCore's [smart warehouse management](#) suite is the foundation of our [smart 3PL fulfillment platform](#). With just one platform, you can streamline key touch points within your warehouse operation and eliminate any inefficiency so you can focus on getting the right product to the right person at the right time.
